PROFESSIONAL SUMMARY

Python Backend Engineer with 5+ years of experience building APIs, internal platforms, automation tools, data services, and cloud integrations. Proficient with FastAPI, Django, Flask, Pydantic, PostgreSQL, MongoDB, Redis, Docker, AWS, GCP, and CI/CD. Experienced in turning ambiguous business problems into tested, deployable software while maintaining and modernizing legacy systems.

CORE SKILLS

Backend: Python, FastAPI, Django, Flask, Pydantic, REST APIs, service integrations, background processing

Databases & Data: PostgreSQL, MariaDB, MongoDB, Redis, InfluxDB, SQL, Pandas, ETL, Dagster

AI Integrations: OpenAI API, Google Vertex AI, LLM integrations, n8n automation workflows

Cloud & Delivery: AWS Lambda, AWS S3, GCP, Docker, Rancher, GitLab CI/CD, Git

Quality & Collaboration: pytest, unit testing, code reviews, debugging, clean code, legacy modernization, agile delivery

PROFESSIONAL EXPERIENCE

Python Developer

Mar 2026 - Jun 2026

Delfos | Brazil - Remote

- Built and maintained Dagster pipelines for processing operational data from solar and wind energy assets.
- Reduced integration complexity across renewable energy systems by developing Python tools and APIs connecting InfluxDB, PostgreSQL, and pipeline services.
- Improved service reliability through unit testing, Dockerized components, and GitLab CI/CD pipelines.

Software Engineer II - AI Specialist

May 2025 - Oct 2025

Softplan | Brazil - Remote

- Enabled internal products to use generative AI by developing Python APIs and reusable components connecting business systems to LLM pipelines.
- Improved recommendation service performance by building a FastAPI service with Redis caching, multiple recommendation strategies, Docker, and automated tests.
- Shortened chatbot prototyping cycles by creating n8n automation workflows and OpenAI integrations deployable through Rancher and GitLab CI/CD.

Data Engineer - Python Services

Nov 2024 - Apr 2025

DOJO - Smart Ways | Brazil - Remote

- Automated image-to-data processing by building Python services around AWS Lambda, S3, and Vertex AI for structured product attribute extraction.
- Made AI predictions accessible to downstream systems by exposing processing flows through APIs and Dockerized components.
- Improved release confidence by adding unit tests and separating input, prediction, validation, and output responsibilities.

Software Engineer

Dec 2021 - Aug 2024

QuintoAndar | Brazil - Remote

- Accelerated revenue experiments by developing Python services, internal APIs, automation tools, and ETL pipelines for an experimentation-focused squad.
- Reduced manual support work by building internal endpoints and tools that streamlined operational workflows.
- Protected delivery continuity by reviewing code, writing tests, troubleshooting incidents, and maintaining legacy services and databases.

Python Full-Stack Developer

Aug 2020 - Nov 2021

Spinver | Brazil

- Increased lead contact coverage by at least 40% by building Python crawlers and a Brazilian phone extraction tool with 98% accuracy.
- Expanded data acquisition capacity by developing Scrapy-based agents, Redis-backed workflows, and integrations with SQL and NoSQL databases.
- Kept customer-facing and internal systems operational by maintaining Python applications and the company website with HTML, CSS, JavaScript, and Bootstrap.

EDUCATION & LANGUAGES

Education: Digital Games, Descomplica - In progress (2025-present)

Languages: Portuguese - Native | English - Advanced
